

HARBORLITE®

Lightweight Pool Base

Take the load out of laying pool base

Above ground pool installation is much easier when you use Harborlite Pool Base perlite.

Because Harborlite Pool Base perlite is so much lighter than sand, it can be shipped to the customer along with all the other pool components. No more waiting around for the sand to arrive.

A large bag of Harborlite Pool Base perlite weighs only 30 lbs. The same size bag of sand would weigh 450 lbs.

Harborlite perlite has been used as a lightweight aggregate for nearly fifty years. It is heated to over 1000 degrees during processing, and is, therefore, inert and contains no seeds. Pool liners being punctured by sharp leaves from plants such as nut grass are virtually eliminated. Harborlite Pool Base perlite contains no sharp or jagged stones or rocks, so this source of holes in the pool liner is also eliminated.

IMERYS

ABOVE GROUND POOL INSTALLATION IS MUCH EASIER WHEN YOU USE HARBORLITE POOL BASE PERLITE

Harborlite Pool Base perlite is less abrasive than sand so you don't have to worry about any perlite that splashes on the pool wall during watering. It should not wear the liner as it moves during installation and filling.

No special tools are needed for perlite installation.

After the pool wall is erected, perlite should be poured carefully around the inside edge of the pool to form the cove. It should be watered and rolled in the same way as sand, so that a firm base is formed. Continue to pour perlite until the base is approximately 1" deep after rolling. The lightweight poolbase is now ready for the liner and many years of use.

HARBORLITE POOL BASE PERLITE

Pool Shape	Pool Size	Number of Harborlite Pool Base bags needed
Round (diameter)	15'	5
	18'	7
	21'	9
	24'	11
	27'	14
	28'	15
Oval (LxW)	12' x 24'	7
	15' x 25'	10
	15' x 30'	12
	16' x 32'	14
	18' x 33'	16
	15' x 40'	17
